DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

- 1. Determining the scope and contents of the prior art.
- 2. Ascertaining the differences between the prior art and the claims at issue.
- 3. Resolving the level of ordinary skill in the pertinent art.
- 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claims 1-17 are rejected under 35 U.S.C. 103(a) as being unpatentable over US Patent #5,501,053 to GOLEBY. In reference to claims 1 and 17, GOLEBY discloses the use of a reinforcing element including oppositely disposed geometric channels (13,14) spaced by a web (10). GOLEBY discloses the basic claimed reinforcing element except for explicitly detailing the length and thickness thereof. Regarding claims1 and 11-16, it would have been obvious to one having ordinary skill in the art at the time the invention was made to select a known length and thickness suitable for the use intended as an obvious matter of design choice. For instance, if the device where being use to span a long distance it would appear that a much longer reinforcing element would appear appropriate. In reference to claims 2-4 and 17, GOLEBY discloses the

Art Unit: 3635

use of cylindrical, rectangular (figures 22a,b), triangular (figure h), round (figures 21ab), oval (figures 20a,b) shaped channels. Regarding claims 5 and 6, the web (10) connects with the channels (13,14) at a mid-point bisecting the center of the channels (13,14), figures 27 and 28. In reference to claims 7 and 8, the web (10) connects with the channels (13,14) in a plane offset from the center, figure 28, and tangential, figure 27, to the channels (13,14). Regarding claim 10, the rectangular channels (13,14) of GOLEBY are partially open, see figure 6d.

Claim 18 is rejected under 35 U.S.C. 103(a) as being unpatentable over US

Patent #5,501,053 to GOLEBY. GOLEBY discloses the method of reinforcing a utility

pole, column 6, lines 36-40, including the steps of providing a utility pole reinforcing

member including oppositely disposed geometric channels (13,14) consisting of circular,

oval, rectangular, and triangular shapes, spaced by a web (10), driving the utility pole,

column 6, lines 36-40, and securing the reinforcing element.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Yvonne M. Horton whose telephone number is (571) 272-6845. The examiner can normally be reached on 6:30 am - 3:00 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Carl D. Friedman can be reached on (571) 272-6842. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
